About the Web-Conference

Natural resources are depleting at alarming rates because of their irrational use pattern. Although, utilization of resources is an intrinsic component of the process of development yet, overexploitation of natural resources has led to climate change and environmental degradation. Agricultural biodiversity encompasses the variety and variability of plants, animals and microorganisms at genetic, species and ecosystem level which are necessary to sustain key functions in the agro-ecosystem, its structures and processes for, and in support of, food production and food security. Many people say that local knowledge and culture are also integral parts of agricultural biodiversity, because it is the human activity of agriculture which conserves this biodiversity through sustainable use. Management of natural resources seems to be the only way forward to sustain the Productivity, Biodiversity and Livelihood Security. Department of Soil Conservation and Water Management, CSA University, Kanpur and UP Chapter of SCSI, New Delhi, India, hosted a National Web-conference on "Management of Resources for Improvement of Productivity, Biodiversity and Livelihood Security" which have addressed ways to boost agricultural productivity for food security and sustainable economic development, while conserving and restoring the natural resource base. Major objectives of conducting the Web-conference was to evaluate past research efforts in resources management for sustainable development and livelihood security, to streamline future scientific efforts in support of sustainable livelihood, to draw recommendations for capacity building in soil and water management.

This National Web-Conference on "Management of Resources for Improvement of Productivity, Biodiversity and Livelihood Security" provides appropriate forum for eminent scientists, researchers, Extension workers, scholars, and students to discuss and share emerging issues and advances in the areas of resource conservation, agro-biodiversity improvement in agriculture productivity and livelihood security.
